

• Galaxy AI Assistant • for warehouse & terminal

The intelligent coworker for modern warehouse operations

Terminalhubben unifies operations, information and decision support in one platform — adding a context-aware AI layer on top of the entire operation. Ask by voice or text, get answers grounded in your data.

REST APIs

An AI layer on top of the entire operation

Galaxy isn't a search box. It's a context-aware assistant that interprets the question, retrieves the right data and answers with relevance — in real time.

Context-aware answers with RAG

Galaxy retrieves information from the operation's data sources and grounds every answer in actual data — not generic guesses.

Question

Agent interprets

RAG retrieval

Grounded answer

Röststyrning

Ask questions hands-free in the middle of forklift work and have the answers read aloud — without stopping.

Live dashboard

Operations, status and KPIs in real time — visualized so data is instantly understandable.

Document generation

Presentations, whitepapers and technical documentation — generated and exported as PDF.

PDF

Whitepaper

Report

Enterprise-anpassning

Configurable for the organization's roles, flows and needs — with role-based access and an architecture built to scale from one terminal to many.

• Features

Everything Galaxy can do for the team

Operational support, data visualization and documentation — in one interface, available by text and voice.

✓ AI assistant An ever-present digital colleague.	✓ Voice control Hands-free in the middle of work.
✓ Text assistant Chat with context memory.	✓ Dashboard A unified real-time overview.
✓ KPI visualization Charts and trends.	✓ Warehouse data Status, locations, movements.
✓ Productivity Less friction, faster flows.	✓ Presentations Generated from current data.
✓ Whitepapers In-depth decision material.	✓ PDF generation Exported ready to share.
✓ Technical documentation Living, close to the code.	✓ Enterprise customization Roles, flows and needs.

The platform in action

Real views from the running PWA app — from picking and operations info to AI analysis and group chat.

Home

Modules for picking, performance, operations info, group chat and Galaxy AI.

Galaxy Pick

Voice-controlled calculator that totals the pick round in real time.

Operations info

Real-time messages with voice notification and quick actions.

Performance data · AI analysis

Galaxy identifies bottlenecks from pick comments.

Group chat

Polls and scheduling questions right in the terminal.

Clear layers, one intelligent hub

Galaxy sits between the user and the data. Each layer has a defined responsibility — from question to decision support.

```
# The operator's question is sent to Galaxy
POST /api/galaxy/ask
{
  "query": "Free pallet spots zone B?",
  "mode": "voice",
  "context": "terminal-malmo"
}

# Galaxy responds — grounded in data
{
  "answer": "42 free of 320 (87%)",
  "sources": ["wms.live", "rag.index"],
  "latency_ms": 1180,
  "confidence": 0.94
}
```

Tech

Modern stack, built to scale

Proven technologies chosen for development speed, type safety and cloud-native operation.

Frontend

01

Component-based, type-safe interface installable as an app (PWA).

React

TypeScript

PWA

Backend

02

API layer with real-time communication via WebSockets.

Node.js

REST APIs

• Integrations

Plugs into your existing IT environment

Terminalhubben is no isolated island — it connects to the infrastructure a modern logistics organization already runs.

WMS

Real-time data on stock status, locations and picking.

ERP

Orders, items and financial flows.

APIs

Secure data exchange in both directions.

Azure AI Services

Cloud for AI, speech and cognitive functions.

Microsoft 365

Tools and identity in a Microsoft environment.

Third-party systems

Extensible for more tools as needed.

Business value — value in operations and management

01

More efficient information flows

The right information reaches the right person without detours.

02

Reduced training time

Guidance right in the work shortens time to productivity.

03

Higher productivity

More time on value-creating work.

04

Better decision support

Statistics and analyses on demand.

05

Faster onboarding

Tacit knowledge made searchable and accessible.

06

Everyday AI support

A digital coworker around the clock.

• The creator

One person — the whole stack

Robin Agberg

System architect · Full-stack · AI · Product design

Terminalhubben and Galaxy AI Assistant were built from idea to finished platform single-handedly. Architecture, frontend, backend, AI integration and product design were all driven by one and the same person — proof of breadth across the entire modern software stack.

System architect

Full-stack developer

AI developer

Product designer

Ready to present to decision-makers

Terminalhubben demonstrates full capability in system architecture, full-stack, AI integration, UX and product development — in a single platform.
